

The published works of Ferdinand J. H. Mueller¹

Dedicated to the memory of Doris Sinkora (1927-2017)

Dedication

This list is a 'third edition' of Churchill, Muir and Sinkora (1978) and their 1984 supplement. The 'second edition', prepared under Doris Sinkora's supervision, is 'Appendix B: Mueller bibliography' in Home, Lucas, Maroske, Sinkora and Voigt (2006), pp. 566-685.

Doris Sinkora began work on assembling the list in the early 1970s at the National Herbarium of Victoria. She and Bruce Muir collected and edited the material, but it is due to Doris that the list extended beyond the explicitly taxonomic publications (Maroske (2018)). That inclusion of his wider publications shed much light on the extent of Mueller's involvement in other activities.

Doris continued to supervise the enlargement of the list beyond 1984, curating items as they were reported by others especially, from 1987, the editors and paid and volunteer research assistants of the von Mueller Correspondence Project. The additions to 1998 are included in the second edition.

When Doris was unable to continue curating the list Sara Maroske assumed that role, later passing it to Arthur Lucas. We have had the advantage of internet search facilities, but the hard hours manually searching libraries, catalogues and indexes produced an excellent foundation: Doris even obtained a 'stack pass' for the State Library of Victoria so that she could trawl for unindexed 19th century material.

Scope

All known publications of which Mueller is acknowledged as, or has been shown to be, author or translator are included. Contemporary re-publications in whole or in substantial part are included, but not paraphrases. Letters to the Editor and letters to third parties that were published over Mueller's name are also included. Some published extracts of letters to third parties have been listed. Even if the proportion of the item comprising the Mueller quotation is small, it has been included in this bibliography if it demonstrates Mueller's advice or concerns. The agricultural press often quoted from editions of Mueller's *Select extra tropical plants...*, but only substantial extracts that quote most of a long entry are included. Modern print on demand or twentieth century microfiche or print editions are excluded. The first of the three twentieth century publications is a delayed printing of an item received in London in 1894.² The others are Portuguese editions of *Select extra-tropical plants*; Mueller had been seeking a translator since 1881, but a translation was not completed before he died in 1896.

Ellwood Cooper, of the Santa Barbara College, California, republished³ several of Mueller's works in 1876. These republications are bibliographically difficult. Two volumes

¹ Last updated 26 February 2023.

² See Francis Petrie to M, 8 April 1894, in the *Correspondence* as 94.04.08a.

³ Because of potential ambiguity, unless in a quotation reprint is used to mean instances where the original publisher has either included the item in a later edition or has issued the item as a stand-alone piece using the same type, perhaps repaginated. When an item is issued by another publisher republished or republication is used

with identical title pages were produced, one with 237 pages and the other with 621 pages; some of Mueller's items were included in each and some included in the first were omitted from the second. The shorter version includes an essay by Cooper and an extract from a Sydney nurserymans catalogue; the longer contains data on temperature and rainfall at Melbourne, as well as the republications of Mueller's articles. The shorter version was published by July 1876, when it was reviewed in *Daily Alta California* (San Francisco), 24 July 1876, p. 2. In this listing the shorter version is referred to as edition 1 and the longer as edition 2.

Some items were summarised, often in translation, in other journals or bibliographies. Where these summaries are extensive, or include lists of new taxa, details are noted under the relevant entry. No exhaustive search has been made for such summaries, but they have been noted when found.

Mueller is the author of plant names in publications by many other authors, for example, in a series of papers on Papuan Orchids (Kränzlin (1894), Kränzlin (1895)) and algae in Harvey (1858–1863). These items are not included as publications by Mueller. Australian vascular plants that Mueller authored in his own or others publications are easily found using the author search facilities in [APNI](#), Australian Plant Name Index, or to include plants named by Mueller from extra-Australian localities, [IPNI](#), the International Plant Names Index. For non-vascular plants, see the relevant specialist data bases, such as Guiry & Guirys, [AlgaeBase](#).

Some nineteenth-century bibliographies include Educational collections of Australian plants, Parts I–III, 1873, 1875, 1876. These are exsiccatae, and although important and reviewed in several places, are not considered publications in this bibliography; nor are the sets of Mueller's Australian collections offered for sale in the early 1850s in an editorial footnote to a paper in *Linnaea*, see also Lucas *et al.* (2006, pp. 34–36) and Maroske (2007).

The bibliography in Knapp (1877) has proved useful in identifying some translated extracts of publications, which are entered in the publication list, and extended summaries, details of which are added as a note to the relevant entry. Knapp also includes references to reviews of Mueller's works; these are not listed here.

Some of Knapps citations are tentative. Where these can be reconciled with an item in the bibliography this is done silently. Some, however, are spurious. These are included, with comment, in the list of spurious attributions provided below.

The volumes of *Repertorium annum Literaturae Botanicae periodicae* have also been examined, and the entries treated in the same way as those in Knapps bibliography.

Structure and arrangement of entries

The bibliography entries are arranged in chronological order by month of publication, e.g. 85.10.04 = year of publication (1885) + month of publication (October) + number of this reference in the bibliography (fourth for October 1885). The last two digits have no chronological significance, merely showing the sequence in which items were added to the bibliography. The exceptions to this format relate to early twentieth century publications, items where the month of publication is not known, and items that are jointly authored, thus in 05.13.01, 05 = 1905 not 1805, and 13 = the month of

publication is not known; in 88.14.01, 14 = a jointly authored publication regardless of the order of the authors names. For jointly authored items the month of publication, if known, is given in the notes to the entry.

An entry comprises the bibliography number, and details of the publication.

It may also include up to three note fields, each enclosed in square brackets. The leading optional field describes the nature of the item, if not a standard article or volume; immediately following the bibliographical details there may be an annotation drawing attention to features of the item, which may be followed by a field with internal cross-references. For example,

58.08.03 [Letter] *In* Aufforderung zum Eintausch von Australischen Sämereien. *Hamburger Garten- und Blumenzeitung*, **14**, 383. [in Churchill *et al.* (1978) and Home *et al.* (1998) as 58.13.05] [See also 58.08.01]

has all three optional elements. This example is one that has been re-dated. The former reference number is noted. That earlier number is also listed in the sequence and cross-referred to the new date:

58.13.05 [see 58.08.03]

Some items in the previous edition have been deleted and a short explanation of the reason for deletion provided:

61.13.08 [Deleted; entry was Mueller's brief note on his editorial interventions when he transcribed the field books kept by William Wills during the exploration journey from Coopers Creek to the Gulf of Carpentaria and return, and recovered at Coopers Creek after Wills death.]

Reasons for redating are given in the notes, except when it is an item from the following sources. For *Proceedings of the Linnean Society of New South Wales*, the list showing dates of publication of parts of the proceedings for each year in the *Index to Volumes I-L* published by the Society in 1929 has been used without comment; for *Hookers Journal of Botany and Kew Garden Miscellany*, the tabulation in TL2, publication number 3013, has been followed; for *Mittheilungen aus Justus Perthes Geographischer Anstalt*, the dating is based on the notice at the end of each issue stating when it was closed. *Botanisches Centralblatt*, a weekly journal, does not give the actual day of publication before 1889 but an issue number for the year is given; articles from it have been dated to month on the assumption that they were published mid-week as they were when the issues began to be dated. *Hamburger Garten- und Blumenzeitung* is dated on the assumption that the 12 issues for each volume were issued monthly.

Many **newspapers**, especially those whose editions consisted only of four pages, did not number their pages, but the actual page in the issue is given without comment.

The **style** used here follows that used in the previous editions, with three exceptions. Firstly, citations to newspapers and similar are given as date and page number, rather than volume and part, as this is the form most easily found using digital newspaper files online. Secondly, the titles of journals are given in full, rather than abbreviated, as this also facilitates searching for them online. Thirdly, cross-references to republications or extracts are given in full only once, with other entries pointing to the item under which the full list is given; for example, [see also 72.07.01 &c.] leads to Mueller's article Select plants (exclusive of timber trees) readily eligible for Victorian industrial culture, with indications of their native countries and some of their uses, where the entry numbers of all of the more than 65 known republications or substantial extracts are listed.

The author of the entries is to be read as F. [von] Mueller; in jointly authored publications he is represented by ___, e.g. ___ & O. W. Sonder = F. Mueller & O. W. Sonder.

Fragmenta Phytographiae Australiae was printed and issued in parts. Each issue is listed as a separate entry according to its date of publication, and the number of the bound volume in which they were also issued is given. The month of issue of the final parts of each of the volumes of *Fragmenta Phytographiae Australiae* is not printed on their final page; nor were they given a fascicle number. The final parts always contained an index, and usually additional material. Indexes are not dated and almost certainly were printed later than the rest of the volume but, except for 75.13.01, the indexes have been retained in the same entry as the corresponding additional material, consistent with George (2005). Comments are provided when there is evidence of a substantial delay in printing the index. The titles of the sections in the final fascicles are indicated in these entries, for example

59.13.04 *Fragmenta Phytographiae Australiae*, 1 (Additamenta ad volumen primum; Explicatio partis analyticae illustrationum; index), 241–252. [included in bound volume 60.02.04]

Other titles issued in parts also give the number of the bound volume as issued, for example

71.05.02 Succinct observations on a new genus of fossil Coniferae. *In* Reports of the Mining Surveyors and Registrars. Quarter ending 31st March 1871. Appendix B, 48–49, plan, section & plate 1. *In* Victoria — *Parliamentary Papers — Votes and Proceedings of the Legislative Assembly* 1871, 2 (No. 26). (Government Printer: Melbourne). [tabled 18 May] [see also 72.01.11, 74.13.11; reissued as part of 74.13.07]

The entries for the consolidate volumes list the numbers of the parts it contains, for example

77.13.14 *Descriptive notes on Papuan plants*. vol. 1. 1875 (Government Printer: Melbourne) [bound volume; contains 75.11.01, 76.04.01, 76.06.01, 76.12.03, 77.02.01, 77.13.02. The date of issue of the bound volume has not been determined. Presentation copies inscribed by Mueller to Arthur King (Library, Royal Botanic Gardens Victoria) and Dr W. P. Gibbons (Library, University of California, Berkley) are undated; Kings College London, in its Foreign and Commonwealth Office Historical Collection, has a bound copy, stamped Received C.O. 20 Sep 1878. The University of Chicago has a copy of the complete work, stamped on the title page Received April 25 1877 Department of Agriculture, but this has been locally bound with the dedication page at the end of the volume and the final part may have been received later than the date shown.]

Before *Parliamentary Papers* were published, they were ordered to be printed after tabling in the relevant House. Papers usually carry a date when they were tabled and ordered to be printed, or that date can be found from *Votes and proceedings* of the relevant legislature. Papers rarely have any more precise date of issue than the year, sometimes clarified by reference to a specific session of Parliament. Notices, occasionally republication, in newspapers often show when a paper was issued, usually very close to the date they were ordered to be printed. Where there is evidence of an apparent substantial delay before the paper was issued this is indicated in a note.

Extra-prints that filled the role of 20th century page-proofs, preprints and reprints were often distributed by Mueller. Cases where extra-prints were not followed by the intended publication, or are known to have significantly preceded publication in the journal, have been noted, for example

91.08.03 Brief remarks on some rare Tasmanian plants. [Almost certainly a proof of 92.06.02; it must have been sent, at least to German journals, soon after the paper was read on 17 August 1891 to have appeared

in the 7 October 1891 issue of *Botanisches Centralblatt*, 91.10.02; in Churchill *et al.* (1978) and Home *et al.* (1998) as 92.13.05] [see also 92.06.02 &c.]

Effective publication under the *International Code of Nomenclature for algae, fungi and plants* (Turland *et al.* 2018) is not established by inclusion in Mueller's publication list below.

In some cases, the date on the title page of a publication differs from the date of issue. Where known, the latter date has been used in the bibliography number of the item.

Letters cited in the notes are included under the given date in the *Correspondence*. Where there is more than one letter of the relevant date the citation is extended to give the precise file number of the letter:

60.01.05 *Address of the President, Ferdinand Mueller*, M.D., Ph.D., F.R.G. & L.S., &c., &c. (Mason & Firth: Melbourne). [A preliminary version was distributed by 25 January 1860, see letter F. McCoy to Mueller, 26 January 1860; proofs were returned 26 January 1860, see letter Mueller to J. Macadam 26 January 1860, in the *Correspondence* as 60-01-26a. In Churchill *et al.* (1978) and Home *et al.* (1998) as 60.13.10] [see also 60.06.02].

Except for a very small number of cases, items with a bibliography number have been seen by an editor, either in the original hard-copy form, as photocopies, scans or in web-based facsimiles. The exceptions have notes explaining their inclusion. Unseen items cited elsewhere which have not been shown to be spurious are listed below in the section Cited works not seen.

Where available, links to URLs of sites providing access to page images are given. Links are accessed via the item number. Neither the von Mueller Correspondence Project nor the Royal Botanic Gardens Victoria has any responsibility for the stability of these links. Where possible, precise links to the beginning of the item have been given. For newspapers, especially, the link is often to a section of a page, not always to the beginning of the article itself. In some cases, the links are to a whole volume, when the site search facility can usually be used to find the article. For works issued in decades, for example, *Eucalyptographia*, the grouped entries used in the previous editions are preserved, with the link from the item number leading to the first of the decades included in the entry; links to the other decades in the entry may be given in the notes. Where the issue of the journal in which the item appeared is not available online, a link, if available, is given to a version held in a library as a proof or extra-print. Images of these sheets should not be relied upon for critical work as it is known that in some cases Mueller corrected the text before the definitive version appeared. Some links are behind a pay-wall and require a subscription, but wherever possible such sites are known to be licenced by many institutions, for example *ProQuest* and *JSTOR*.

It is probable that more items will be found, especially in newspapers. The value of this bibliography will be greatly enhanced by anyone able to supply additional material or references. Please send details, including a URL if available, to muellercorrespondence@rbg.vic.gov.au or Mueller Correspondence Project, National Herbarium of Victoria, Private Bag 2000, Birdwood Avenue, South Yarra, Victoria, Australia, 3141.

Spurious attributions of authorship

Citations to supposed works by Mueller that have been shown to be spurious are listed here. Some of the spurious titles contain errors in the spelling of plant names: attention is drawn to these cases in the notes to the citation.

- n.d. Botanical Report on the North Australian Expedition. *Transactions of the Philosophical Society of New South Wales*.

Item 141 in Knapp (1877), in the section Nur dem Titel nach bekannte Arbeiten Mueller's [Mueller's works only known by title]. No paper by Mueller has been found in Transactions of the Philosophical Society of New South Wales. It is possible that Mueller presented a version of his paper that became 58.05.01 to a meeting of the Society while he was living in Sydney in early 1857, working up the botanical results of The North Australian Exploring Expedition. The completed report was sent to Augustus Gregory on 20 May 1857, see covering letter in the *Correspondence* as 57-05-20a. However, no report of such a presentation has been found in the Sydney press, nor was it published in *The Sydney Magazine of Science and Art*, which printed papers presented to the Society in 1857 and 1858.

- n.d. Remarks on the vegetation of South Australia.

Item 145 in Knapp (1877) in the section Nur dem Titel nach bekannte Arbeiten Mueller's; this may be a misunderstanding of 68.03.02 which Knapp did not list; no other similar title by Mueller has been found.

- n.d. Lecture on rust in wheat.

Item 152 in Knapp (1877) in the section Nur dem Titel nach bekannte Arbeiten Mueller's. This is probably 65.04.05.

- 1860 *Das grosse illustrierte Kräuter-Buch: eine ausführliche Beschreibung aller Pflanzen, mit genauer Angabe ihres Gebrauchs, Nutzens und ihrer Wirkung in der Arzneikunde*. J. Ebner: Ulm. [As Dr. Ferdinand Müller.]

There were at least 8 editions, up to 1892. This title is widely attributed to Mueller; the 1871 edition and later do not include von, which after 1869 became part of his legal German surname and which he routinely used. It is not listed in the bibliography prepared by Knapp (1877) and Mueller himself does not mention it when claiming in a letter to Rudolf von Fischer-Benzon 16 December 1887 that he was the first Australian who had one of his works published in the German language, that is, a translation by Edmund Goeze of the New South Wales edition of von Mueller's *Select extra-tropical plants* ... that was published as 83.13.06.

- 1861 Notice of donation of Conchylien und Fossilreste des Thier und Planzen reiches aus der Gegend der Ballaarat. *Verhandlungen der Kaiserlich Königlich Geologischen Reichsanstalt*. 12, 80.

Although listed under publications by Mueller in Etheridge & Jack (1881, p. 120), as 1860, the publication date is 1861. The item is a paragraph in the report by the director, W. Haidinger, Bericht vom 31. Juli 1861 [Report of 31 July 1861], recording the receipt in Vienna of a crate sent by Mueller containing shells and fossil remains of animals and plants from the Ballarat area.

- 1861 Australian exploration, an introductory chapter in a volume announced as The journals of the expeditions into Central Australia, conducted by Messrs Herschell Babbage, MDouall Stuart and Alex Tolmer... by Daniel David Herrgott. Melbourne.

The volume apparently never appeared despite being advertised as in the press from late December 1860 up to mid-January 1861 (see, for example, *Age* (Melbourne), 14 January 1861, p. 3). It is likely that the chapter would have been a republication or a reworking of Mueller's earlier essay in *Transactions of the Philosophical Institute of Victoria*, i.e., 58.05.03.

- 1863–78 *Flora Australiensis*. 7 volumes, Reeve: London.

Flora Australiensis (Bentham 1863–1878) is described on the title pages as by George Bentham, assisted by [Baron] Ferdinand [von] Mueller, but is frequently cited as a joint work, see for example, Burkhardt *et al.* (2018), 662. Bentham was quite explicit that the work was his alone:

the *Flora Australiensis* is sometimes quoted as the joint work of Bentham and Mueller, when it is entirely and exclusively mine, with the assistance indeed, but not the cooperation, of Baron v. Mueller, this assistance being of precisely the same description as that which I derived from the herbarium and detailed MS. descriptions of Robert Brown, from the herbarium and notes of A. Cunningham, from the rich herbaria of Kew, from the *Flora Tasmanica* and other published works of

the Hookers, as well as from the numerous instructive notes of the Hookers, of Planchon, and others who had worked in the herbarium. In the case of Baron v. Mueller, however, the extreme liberality with which he gave up in my favour his own projects for a general Flora of Australia, and the great value for my purposes of the very numerous specimens of each species which he had collected into the Melbourne herbarium, the whole of which he unreservedly lent to me, seemed to me to demand a special recognition in the titlepage of the Flora, which has thus been misconstrued into an indication of cooperation. A joint work was impossible where consultation was prevented by the great distance which separated us; to procure an answer to the simplest question required four or five months. The descriptions in the Flora are drawn up from the actual examination of specimens, generally checked by a comparison with the MS. notes and printed works above referred to, amongst which Baron v. Mueller's *Fragmenta*, regularly transmitted to me as printed, bear a prominent part (Bentham 1884, 304–305).

- 1866 Translations of The last letters written by Leichardt (*sic*), *South Australian Register*, 15 January 1866, p. 3; 23 January 1866, p. 2; 6 February 1866.

Although the translation of the three letters was not attributed to Mueller in the newspaper, subsequently they have often been stated to have been made by him. Darragh (2018) demonstrates that the attributions are false and lists other newspapers in which these translations appeared.

- 1866 Specimen of Wood indigenous to the Southern District of Australia (Sydney).

Item 82 in Knapp (1877), described as 8°, but not marked as seen by him. It is almost certainly spurious, referring to the wood books prepared by Mueller as a method of displaying the structure of woods in transverse and various longitudinal sections. See Mueller to William Hooker, 29 January 1862, in the *Correspondence* as 62-01-29a.

- 1869 Report upon Mikania Guaco.

In a report of the meeting of the Acclimatisation Society of Victoria held on 2 March 1868, the *Ballarat Star*, 4 March 1869, p. 3, reported Dr F. Von Mueller read his report upon the "Mikania Guaco," a plant indigenous to South America, and supposed to be very useful in cases of snake-poison. The *Age* (Melbourne), 3 March 1869, p. 3, and its sister weekly the *Leader* (Melbourne), 6 March 1869, p. 11, carried the same report, but misspelled the name of the plant as Mikania Guaw. Neither a manuscript nor a likely alternative report published by Mueller has been found.

- 1870 Contribution to the Flora of Tasmania.

Item 99 in Knapp (1877), said to be from Tasmania, Proc. Roy. Soc, but not marked as seen by Knapp. Probably 69.13.03.

- 1872 The Victorian Exhibition opened 6 November 1872. *Official Catalogue of Exhibits* (Melbourne).

Item 106 in Knapp (1877), but not marked as seen. The Catalogue includes a list of exhibits from the Director of the Botanical Gardens, Melbourne, pp. 47–50, but there is no text attributed to Mueller.

- 1873 *Boronia megastigma*, *Curtiss Botanical Magazine* **99**, tab. 6046.

Cited in *Repertorium annum* **3**, 148 (1877). The item is an illustration of *B. megastigma*, with accompanying text signed J.D.H. [Joseph Dalton Hooker]. The plant was introduced into Kew by seed originally received from Baron von Mueller. There is a short summary, also cited in the *Repertorium* entry, in *Journal de la Société centrale d'horticulture de France* second series, **8**, 122.

- 1874 New plants at the Antipodes. *The Garden* **6**, 99.

Item 119 in Knapp (1877), but not marked as seen; also cited in *Repertorium annum* **3**, 181 (1877). The item, published 1 August, is a republication of an anonymous news report in the *Sydney Morning Herald*, 8 May 1874, p. 6, of a collecting trip Mueller undertook in January 1874. Mueller referred to this journey in 74.09.01, pp. 7–8, and described it in his letter to George Bentham of 27 January 1874.

- 1874 *Correa Laurenceana*. *Belgique horticole* **24**, 134.

Item 120 in Knapp (1877), but not marked as seen; also cited in *Repertorium annum* **3**, 145 (1877). The item is a short note apparently extracted from New Plants at the antipodes, above.

- 1874 *Caulinia spinulosa*. *Journal of Botany* **12**, 339.

Item 122 in Knapp (1877); also cited in *Repertorium annum* **3**, 110 (1877). The item is an editors note drawing attention to 74.08.01, p. 219.

- 1874 *Babingtonia*. *Journal of Botany* **12**, 371.

Item 123 in Knapp (1877). The item is a short note, apparently by the editor, reporting that Mueller had erected a new genus after the former genus *Babingtonia* was synonymised with *Baeckea*. Mueller changed his mind and no formal publication appeared; see Mueller to George Bentham, 14 July 1874 (in the *Correspondence* as 74-07-14a) and George Bentham to Mueller, 18 October 1874 (in the *Correspondence* as 74-10-18c).

- 1874 Appendix to new vegetable fossils of Victoria.

Cited as title only in *Repertorium annum* **4**, 193 (1878). The citation is to *Nature* **11**, 220 (14 January 1875), where it is included in a list of Books and pamphlets received. The reference is most likely to be a slightly erroneous citation of 74.12.01, which was printed as an appendix, as were others in the series, to *Reports of the Mining Surveyors and Registrars*.

- 1874 Report of the progress and condition of botany in Victoria, Australia.

Repertorium annum **4**, 219 (1878) lists this title when citing what is a review of 74.09.01 from *Nature* **12**, 33-34 (13 May 1875); the title is from the first sentence of the review. On the same page of *Repertorium*, a reference to the same report omits Botanist from the otherwise correct title of 74.09.01.

- 1875 Note sur le voyage de M. E. Giles dans l'intérieur de l'Australie. *Belgique Horticole* **25**, 241–243.

Item 163 in Knapp (1877), wrongly said to be a translation of 75.01.09; it is a translation of an item Giles neueste Reise im Innern Australiens, signed E.R. [Eduard Regel] in *Gartenflora* **23**, 382 (1874), reporting that Mueller had received information on Giles exploration and giving some details. While this may have been based on material sent to Regel by Mueller, only one small section quotes directly a letter from Mueller.

- 1875 The sundews. *Gardeners Chronicle* 20 February 1875, p. 249.

Cited in *Repertorium annum* **4**, 184 (1878). The item republishes most of a news report in the *Sydney Mail and NSW Advertiser*, 7 November 1874, p. 583, discussing, but not quoting, Mueller's views of the toxic properties of *Drosera peltata*.

- 1875 Three new genera of fossil fruits from the upper tertiary auriferous drifts of New South Wales. *Report of the Geological Survey of Victoria*, No. 2, 1875.

Cited in *Repertorium annum* **5**, 221 (1879). The cited source does not contain the formal taxonomic descriptions, which were first published in 76.12.01 and 76.13.10. The title given in the *Repertorium* appears to have been taken from a brief mention of 76.12.01 in *Journal of botany, British and foreign* **14**, 384 (1876), which is listed by *Repertorium* as having commented on the item. It also lists *American Journal of Arts and Sciences* **11**, 232–233 (1876), but that deals with 74.13.07, a consolidation of earlier reports on plant fossils, but which does not include the new genera described in 76.12.01 and listed in the *Repertorium*.

- 1875 [Extract] in Nouvelles et faits Divers, *Journal de l'Instruction Publique* (Quebec) **19**, 110–111.

The text includes what purports to be a quotation from Mueller, but is actually a republication of the report of a summary by Duchartre of Mueller's discussion of the height of *Eucalyptus* species (in 67.13.02), presented orally by Duchartre to the meeting of the Société Impériale et Centrale d'Horticulture de France held on 9 January 1868 (*Journal de la Société Impériale et Centrale d'Horticulture de France* series 2, **2**, 29 (1868)). The Quebec republication is extracted from an intermediate source, Planchon (1875a, p. 166), which also misapplies quotation marks thus appearing to be quoting Mueller directly.

- 1876 Sur la priorité de la dénomination du genre Waldheimia. *Bulletin de la Société impériale des naturalistes de Moscou* **51**, Séances, 41–42.

Cited in *Repertorium annum* **6**, 191 (1881). The item is a brief report of a communication by Mueller to a meeting of the Society, see Mueller to the Société Impériale des Naturalistes de Moscou, September 1876, in the *Correspondence* as 76-09-00c.

- 1876 Botany of Victoria. *Year-book of facts in science and the arts for 1875*. London. pp. 203–204.

Cited in *Repertorium annum* **4**, 184 (1878). The item is a discussion of some aspects of 74.09.01.

- 1876 *Victorian School Flora* (?).

William Woolls anonymously published in the *Sydney Morning Herald*, 15 September 1876, p. 5, a pre-publication review of the work now being printed. This work was however aborted by the Victorian Government after parts had been printed off. Sheets were being sent to at least Joseph Hooker in Kew, and to Woolls in Sydney. See Lucas *et al.* (2006), pp. 37–39 for a discussion of the circumstances of its approval, then stopping, by the Government. The text was used as the basis for 79.06.04.

- 1877 Hydrocharis morsus-ranae is indigenous to some countries in the southern hemisphere. *Gardeners Chronicle*, 9 June 1877, p. 726.
Cited in *Repertorium annum* 6, 624 (1881). The item is a discussion of the distribution of the species, including reference to 76.12.03, p. 72.
- 1877 Davidsonia pruriens. *Gardeners Chronicle* 30 June 1877, p. 820.
Cited in *Repertorium annum* 6, 216 (1881). The item is a comment on the identity of a plant offered by a nurseryman and the plant described by Mueller in 67.07.05, p. 4.
- 1877 Scientific History and uses of the Eucalyptus Tree and Allied plants.
Given as the title of the work from which extracts are taken in *California Farmer and Journal of Useful Sciences*, 22 November 1877 and following issues (see 77.11.04 &c). The text of the extracts is however taken from 77.08.01, *Introduction to Botanic Teachings at the schools of Victoria, through references to leading native plants*.
- 1878 Wild rice in Queensland. *Gardeners Chronicle* 25 May 1878, p. 668.
Cited in *Repertorium annum* 7, 195 (1883). The item reports that Mueller informed *Gardeners Chronicle* that common rice grows wild in Queensland. The remainder of the article quotes extensively without citation from an article by A late resident, *Morning Bulletin* (Rockhampton) 8 January 1878, p. 2.
- 1878 Cordyceps menesteridis. *Gardeners Chronicle* 21 December 1878, p. 791.
Cited in *Repertorium annum* 7, 50 (1883). The item is an illustrated note by MJB [Miles Joseph Berkeley] containing a description of the species, the authorship of which is attributed to M. and B.
- 1879 Oberonia palmicola. *Gardeners Monthly*, [June], p. 189.
Cited in *Repertorium annum* 8, 292 (1886). The item is a republication of a paragraph from *Scientific American*, The smallest orchid known, 15 March 1879, p. 168, which summarises and silently quotes from 78.12.03. The title comes from a passing reference to the species.
- 1879 Ptychosperma Normanbyana, *Gardeners Chronicle* 15 March 1879, p. 344.
Cited in *Repertorium annum* 8, 298 (1886) using the spelling given in the *Gardeners Chronicle* text for *P. normanbyi*. Incorrect title for 79.03.01.
- 1879 Livistona Marlae. *Gardeners Chronicle* 21 June 1879, p. 790.
Cited in *Repertorium annum* 8, 298 (1886). The item is an editors article, appearing under the name *Livistona mariae*, commenting upon 79.13.01, and mis-citing the number of the *Fragmenta* in which an analysis appeared.
- 1879 A Eucalyptus forest (E. corynocalyx). *Gardeners Chronicle* 8 November 1879, p. 592.
Cited in *Repertorium annum* 8, 334 (1886). The item is a report of a sketch by [J.E.] Brown of a stand of *Eucalyptus corynocalyx*, reproduced on p. 593, that was sent to the *Gardeners Chronicle* by Mueller.
- 1881 *Catalog zu einem australischen Herbarium, geordnet durch den berühmten Botaniker Baron Ferd. Müller in Melbourne. Eigentum der Ostschweizerischen Geographischen Gesellschaft St. Gallen.*
The item is a lithographed catalogue of specimens, attributed to Mueller as author in the Catalogues of the Utrecht University Library, Oxford University Library and in the State Library of New South Wales (where it has been listed as a manuscript). The arrangement is in alphabetical order of the genera, and not a systematic arrangement as would be expected if done by Mueller. The specimens may have been a gift from Mueller when he was made an honorary member of the East Swiss Society for Economic Geography in 1880; or the membership may have been in return for the gift. No correspondence relating to his membership has been found other than his membership certificate, now in MEL, and transcribed in the *Correspondence* as 80-12-02.
- c.1897 [Seleccionar plantas extratropicales: fácilmente elegibles para la cultura industrial, translated. F. Kurtz]
Reber (1897), in his entry for Mueller, when discussing translations of *Select extra-tropical plants...* states that Herr Prof. Dr. Kurtz eben eine spanische Uebertragung für Argentinien lieferte (pp. 154-5). The edition was evidently never published. It is not included in the list of publications accompanying Harms (1920), the obituary of Fritz (Frederico) Kurtz (1854-1920). It is not listed in the catalogues of the National Library of Argentina, or the combined catalogue of the libraries of the University of Cordoba (Argentina).

Cited works not found

Some cited works have been neither found nor identified as spurious. These include publications in Australian newspapers, of which copies no longer exist in Australian libraries and have not been found elsewhere. These references are listed below. They were obtained from various published and unpublished sources, and their accuracy cannot be guaranteed. Where an item listed as a work not found in Home *et al.* (1998) has since been identified, it has been silently omitted from this section, although reference is made in the notes to the new entry in the publication list.

1847–54 Observations on the use of native plants. *South Australian* (Adelaide).

The source of the article Beobachtungen über die Anwendung der einheimischen Pflanzen, *Hamburger Garten- und Blumenzeitung* 10, 529-532, (54.12.03) is given as Uebersetzt aus der South Australian Ztg (translated from the *South Australian* newspaper/journal). Issues of the *South Australian* after August 1851 have not been found. There were other newspapers with the phrase South Australian in their titles, but a relevant article by Mueller has not been found in any of these, nor in any other accessible surviving issue of an Australian newspaper or periodical between Mueller's arrival in 1847 and the year of the published translation.

1850 Der Murray-Scrub, botanisch skizziert. *Südaustralische Zeitung* (Adelaide), 6 June 1850.

The source of 52.02.03

1850–1 [Sketch of the vegetation of the Onkaparinga Valley].

See the *Correspondence*, letter Mueller to R. Tate, 4 November 1882, where the newspaper is described as the German Newspaper of Adelaide. There were two German language newspapers in the early 1850s: *Adelaide deutsche Zeitung* and *Südaustralische Zeitung*, but the item was not found in the few issues that survive in Australian libraries. The item is reported to have found its way into several home journals then. No copy in a German or British newspaper has been found.

1851 [Proposal re a search for Leichhardt] *Deutsche Zeitung*, 23 July.

Given as the source of 51.08.01. Copies held in Australian Libraries do not include this date.

1851 [Description of *Erianthus mitchellii* F.Muell]. *South Australian* (Adelaide), No. 1271.

Date after 19 August 1851 which is issue 1268; see letter Mueller to Thomas Mitchell, November 1851. This may be the essay mentioned in Mueller to Friedrich Krichauff, September 1851. [In Churchill *et al.* (1978) under 1849.]

1864 *A record of N. W. Australian plants.*

Item 67 in Knapp (1877); also listed as given to the Library of the Royal Geographical Society by Roderick Murchison, Accessions to the Library, from 1st June 1864 to 1st May 1865, *Journal of the Royal Geographical Society* 35, lxxxiv (1865); it could not be found at the RGS library. This may be a reprint version of 63.04.03 issued with an added title page.

1873 [Letter concerning plants of the Riverina] *Riverine Herald*.

Cited as the source of the republication by the *Pastoral Times* (73.07.10) and *Sydney Mail* (73.07.05), but an examination of the issues of *Riverine Herald* online has not found the article in June or July 1873.

1875 [Valuable botanical researches, and reports of the Australian region]. *California Farmer and Journal of Useful Sciences*, 8 April; 15 April

Extracts of 74.09.01. These two issues containing portions of Mueller's *Report* being serialised in *California Farmer* could not be found; to preserve the sequence, blind entries have been made in the publication list as 75.04.03 and 75.04.04.

1875 [Address]. Second annual report of the Victorian Chemists Assistants Association.

Given as the source of 75.13.13.

1876 [Botanical Information. Select textile plants (?).] *California Farmer and Journal of Useful Sciences*, October(?).

Issue 21 is missing from the file; it contained extract number nine being republished from 76.06.02; to preserve the sequence, a blind entry has been made in the publication list as 76.10.04.

1876 [Native grass (?)], *North Eastern ensign* (Benalla, Vic).

The source of 76.08.04.

- 1886 Lord Howes Island and Captain Armstrong. [Letter?] *Cumberland Times*, Cumberland (NSW), 7 August 1886.
- 1888 [Letter, dated 14 May 1888, on cultivation of grasses] *Pastoral News* [19 May 1888].
No newspaper of that name has been found, but it is probably an erroneous citation of 88.05.04, from *Pastoral Times* of that date.]
- 1890 [Letter to Nansen concerning polar exploration], *Dagbladet* (Oslo).
The item is referred to in *Verkusten* (San Francisco), 5 September 1890, p 2; it is probably a version of the letter Mueller to Fridjof Nansen, 17 June 1890, transcribed in the *Correspondence* as 90-06-17a.

Churchill *et al.* (1978) and Home *et al.* (1998) included the following entry

- 1887 [by F. Mueller?] Exploration in New Guinea. *The Record, South Melbourne* [1 January 1887]
[see photocopy of Extra-Print without author, annotated in an unknown hand Baron Ferdinand von Müller.]
- The photocopy could not be found in January 2020, and the State Library of Victoria records the 1 January issue of *The Record* as missing. The issue of 5 January, p. 2, carries an item, without a heading or attribution of authorship, that reports on the progress of exploration in New Guinea. The proprietor, William Potter, was a close associate of Mueller and would almost certainly provide copies of such reports to him whether or not he had provided the information or was an author of the piece. The *Record* often republished articles that had previously appeared. For example, as reported in entry 86.09.07, one of Mueller's letters was printed twice more within three days. It is thus possible, although not certain, that the article reported to be from 1 January might be the same as the one from 5 January.

Published works

1840s

- 81.13.09 [Deleted: text is an amalgam of parts of a letter from Mueller to Ernst Behm dated 12 April 1881, and material from other sources.]
- 81.13.10 [see 81.01.04]
- 81.13.11 [Deleted; a translation of the text discussed under 81.13.09, but erroneously attributing all of it to Mueller.]

[81.13.12](#) *Fragmenta Phytographiae Australiae*, **11** (Supplementum ...) (ed. by Mueller), 43–104. [The completion of the Indices plantarum Acotyledonarum Complectens, solicited from and written by specialists, often with additional comments by Mueller; for the first part see 80.11.01. Evidence from the gatherings and binding suggests that this may have been published in three separate fascicles, viz. pp. 43–74, 75–104 and 105–132, with the last fascicle published after 2 November 1881, and possibly not until early 1882. It contains items by [Braun](#) (Characeae ...), [Hampe](#) (Musci frondosi ...), [Gottsche](#) (Musci hepatici ...), [Krempelhuber](#) (Lichenes ...), [Cooke](#) (Fungi Australiani, ...).

The Cooke item is derived from a manuscript that evidently later formed the basis of Cooke (1881–1883). The Supplement text was editorially arranged and enlarged by Mueller, drawing upon a range of sources listed in his comments on p. 104, including Tenison-Woods & Bailey (1880). Species in the final part of Cooke's text are included in Mueller's own contribution to the Supplement, 81.13.13. Cooke (1883) added a final part to his catalogue, species in which are not listed in 81.13.13.

[Cooke \(1883\)](#) is a merged, repaginated reprint of Cooke (1881–1883) and Cooke (1883). It was issued with a title page Supplementum ad | Fragmentorum Phytographiae Australiae | pro auctoritate | Baron Ferninandus de Mueller, K.C.M.G. | Fungi Australiani | M. C. Cooke, enumerati | (*Impr. Grevillea*, t. X, XI | 1883. | Melbourne. Note that the volume numbers quoted are incorrect as material from tt. IX and XII is included. It is unclear what role, if any, Mueller had in publishing it, so it is not included here as a component edited by him. It contains four coloured plates. In a review of volume 11, published anonymously, but certainly by William Woolls, in the *Sydney Morning Herald*, 17 May 1882, p. 9, it is stated that the volume is illustrated by some elegant figures of Australian fungi. No volume seen has plates. However, Woolls letter to Mueller 13 May 1882 indicates that he prepared the review from parts sent to him, not from the volume issued as bound. Woolls apparently received some plates from Cooke (1881–1883), perhaps intended to be included. In Churchill *et al.* (1978) as part of 81.13.02.] [included in bound volume 82.05.22]

[81.13.13](#) Additamenta pro supplement Voluminis Unidecimi. In *Fragmenta Phytographiae Australiae*, **11** (Supplementum) (ed. Mueller), 105–132. [In Churchill *et al.* (1978) as part of 81.13.02.] [included in bound volume 82.05.22]

[81.13.14](#) *Fragmenta Phytographiae Australiae*, **11** (Additamenta and index), 133–151. [In Churchill *et al.* (1978) (1998) as part of 81.13.02.] [included in bound volume 82.05.22]

[81.13.15](#) Notes from Baron von Mueller. In J. I. Bleasdale, *the olive tree and its products come and the suitability of the soil and climate of California for its extensive and profitable cultivation*, p. 11 (Dewey & Co.: San Francisco). [See 71.11.03 &c]

81.14.01 [Deleted; this entry was in Home *et al.* (1998) referring to 82.14.04 without further explanation; there was no entry with this number in Churchill *et al.* (1978).] [See note at 82.14.04]

- [83.04.07](#) [Proof sheets] Diagnoses of a new genus and species of Verbenaceae from Arnheim Land. [In his letter of 27 April 1883 to Ralph Tate, the editor of the journal, Mueller acknowledged receipt of the proofs, which Tate had sent to him before the paper was read on 1 May 1883. In his letter to Tate of 25 May 1883 Mueller requested an amendment, to change *Tatea acaulis* to *T. subacaulis*. That change, along with some other corrections in the description and the title, was made before publication in the journal. However, in his species listing in 84.03.06 and subsequently in 89.12.03, Mueller used his original name *Tatea acaulis*, as in the proof sheets, rather than the formally published *Tatea subacaulis*. There is a copy of the proof at Kew, accompanying K1067682. The specimen has one of Mueller's labels, with the name *Tatea acaulis*, annotated at Kew Rec^d 5/83, although it is not clear whether the proof accompanied it. Another specimen, K1067681, with Tate's label using *T. subacaulis*, is annotated Com. R. Tate, 7/1884. There is a copy of the proof in the Australian National Library Botany leaflets, PETHpam 538.] [see also 83.12.04].

- 91.13.06 [see 91.06.03]
- 91.13.07 [Proof?] Notes on a new Tasmanian plant of the order Burmanniaceae. [Mueller probably sent a proof of 91.06.03 to *Botanisches Centralblatt* before the formal issue of the Tasmanian journal in June; unusually, neither of the republications (91.02.02, 91.04.03) in *Botanisches Centralblatt* cite a source, suggesting that it was not an extra-print. The proof sent to Mueller by Leonard Rodway on 9 February 1891 would have been too late to have been the source of 91.02.02, but if then sent to Germany by Mueller could have served as the source of 91.04.03] [see also 91.06.03 &c.]
